

My Event Board

Category	Description	Reviewers Comment	Action taken by reviewed group
Build	Could you clone from Git and build using the README file?	I can clone and build this but the instructions are designed for the engr server and are not specific at all.	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	The repo is disorganized but the flow of functions was readable. They could use a lot more commenting.	
Implementation	is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see useful abstractions?	Probably this code could be written faster with another language.	
Maintainability	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	I did not see tests, however I do not believe they need tests currently as much of their project is the visuals surrounding it.	
Requirements	Does the code fulfill the requirements?	Yes except for that on the manage page it is not great for mobile, and the upcoming event listing is not correct.	

My Event Board

Other	Are there other things that stand out that can be improved?	It was easy to break their security with a simple web debugging tool. But they couldn't be expected to know this as OSU does not teach about security so it will not effect my evaluation.
