Category	Description	Reviewers Comment	Action taken by reviewed group
Build	Could you clone from Git and build using the README file?	Yes, io's website. Setup seems to be straight forward	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	variable names're okay. But the organization of php files needs to be improved since many of them are not in directories.	
Implementation	is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see useful abstractions?	They have all they need. Can't determine if it can be easier or faster since different developers have different requirements. To me, it's clean and easy based on their U.I.	
Maintainability	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	They performed unit tests which looked good. They're readable since they use a website as the UI.	
Requirements	Does the code fulfill the requirements?	Yes, they meet all of them basically	
Other	Are there other things that stand out that can be improved?	I'm not sure. It seems this website is a professional, easy-to-use tool. If they want to improve user experiences, they can make more cool features.
